Job Title: Solution Architect

Reporting to: New Project and Technologies

Candidate Profile

We are currently looking for a Solution Architect that will work closely with the project team and product development team.

The candidate shall provide technology based skills relating to the design and implementation of solutions utilizing emerging technologies (e.g.: Web 2.0, BPA/BPM, SOA etc.)

- Development of the system design in line with published SOA design methodologies, including development of documentation and creation of prototype solutions.
- Estimation of the effort to install, build and deploy the application as designed.
- Evaluation and selection of appropriate development methodologies and tools
- Leading and guiding a team of technical programmers to deliver the solution as designed.
- Validation of the performance, availability and scalability of the application design.
- Provide direction and consultation during the build and implementation of the application.

Requirements:

Bachelors Degree in Computer Science or equivalent practical experiences, combined with accomplished object oriented programming, software/system architecture and design, software integration and the utilization of frameworks and design patterns. Experience with Financial, Health Care applications or Supply Chain is considered a plus.

- Relevant Achievements as an Architect designing solutions using Business Process Management (BPM) or Workflow software technologies, including association modeling languages.
- Relevant Achievements as an Architect designing solutions using Enterprise Content Manager (ECM) technologies including document management, imaging, records management and forms management.
